Experiment -1

NAME: KAVYASRI.V ROLL NO:240701249

Design a UI where users recall visual elements (e.g., icons or text chunks). Evaluate the effect of chunking on user memory.

FRAME 1: HOME / FILTER SCREEN

Chunking, Recall & Recognition (Miller's Law) Analysis

The Dog-Pedia home screen applies **Chunking**, **Miller's Law (7 ± 2)**, and **both Recall and Recognition principles** to help users understand, remember, and explore dog breed information.

1. Purpose of the Screen

- Acts as the entry point for users to explore dog breeds.
- Helps users **form an initial mental model** of breed categories, supporting later recall.

2. Key Elements & UI Components

Search Bar

- Allows users to search known breeds.
- **Supports recall** of breed names while also enabling recognition through suggestions.

Filter Controls

- Energy Level and Maintenance & Grooming sliders.
- Help users **recall lifestyle preferences** by mapping memory to visible controls.

FIND Button

- Reinforces recall of task flow (filter → find → explore).

Category Cards

- Icons and labels help users **recognize categories** and **remember them for later navigation**.

3. Application of Chunking

- Filters and categories are grouped into meaningful chunks.
- Chunking helps users **store and recall information as groups** instead of isolated details.

4. Application of Miller's Law

- Total elements remain within 7 ± 2.
- This improves **retention and recall accuracy**.

5. Recall & Recognition Benefits

- **Recognition** helps users quickly identify options.
- **Recall is supported** by repeated exposure to categories, icons, and layout structure.

FRAME 2: PROTECTORS CATEGORY PAGE

Chunking, Recall & Recognition Analysis

1. Purpose of the Screen

- Focuses attention on protector breeds.

- Reinforces recall of the selected category.

2. Key Elements & UI Components

Category Header

- Helps users **recall which category they are exploring**.

Breed Cards

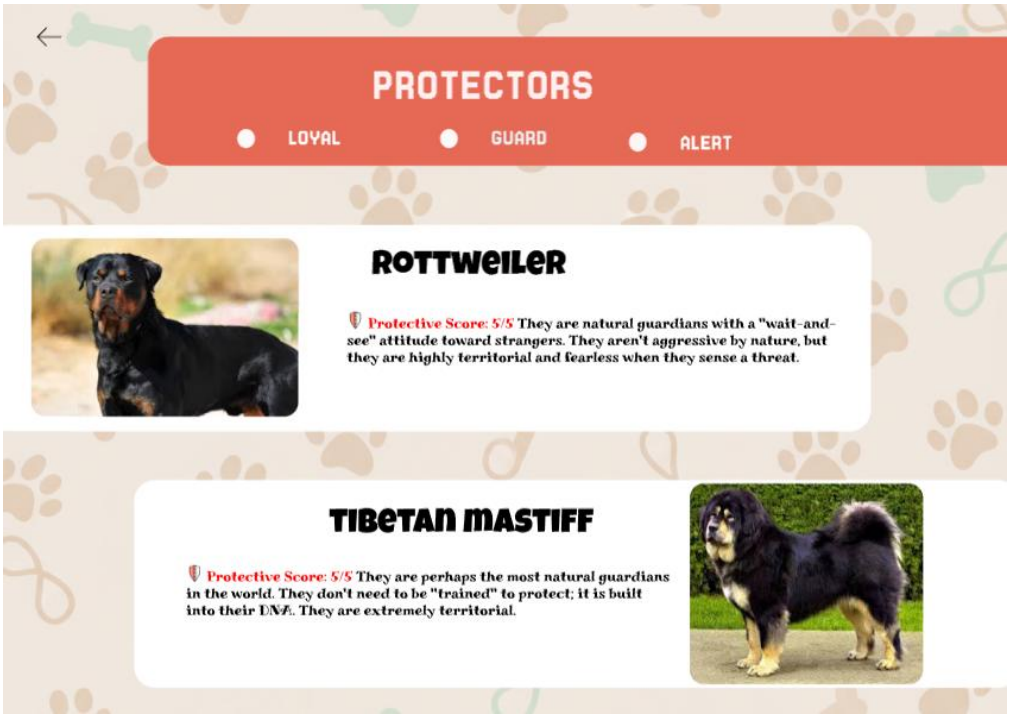
- Image + text combination supports **recognition** and strengthens **memory recall**.

3. Application of Chunking

- Each breed card acts as a meaningful memory unit.

4. Recall & Recognition Benefits

- Users **recognize breeds visually**.
- Repeated exposure **supports recall of breed traits and roles**.



FRAME 3: WORKERS CATEGORY PAGE

Chunking, Recall & Recognition Analysis

1. Purpose of the Screen

- Displays working dog breeds and their behavioral traits.

2. Key Elements

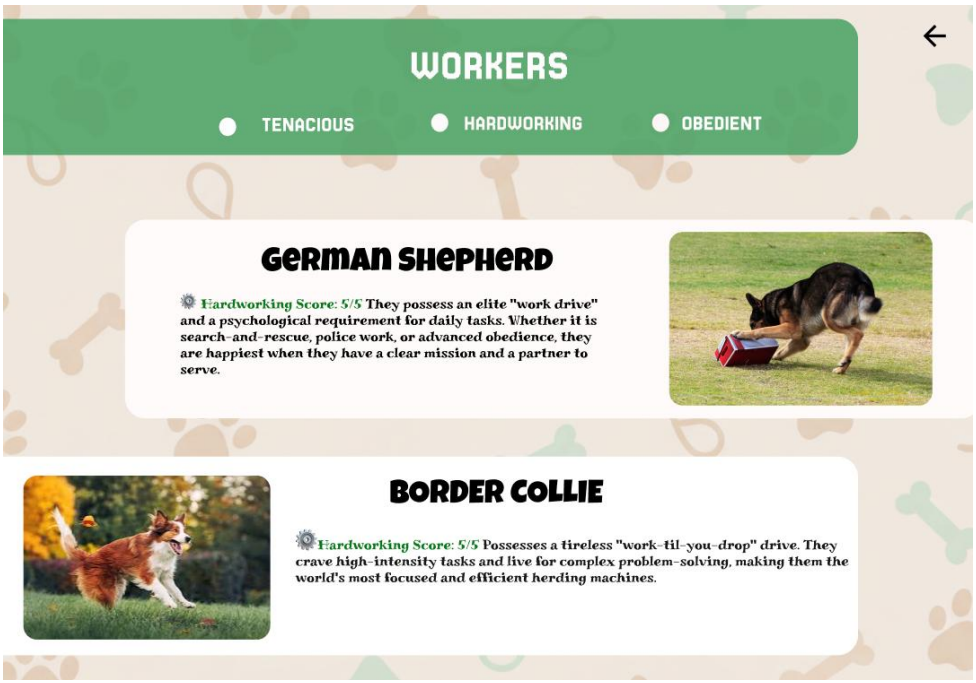
- Consistent layout across category pages.

3. Application of Miller's Law

- Limited breed cards per screen prevent overload and improve recall.

4. Recall & Recognition Benefits

- Layout consistency supports **recognition**.
- Familiar structure strengthens **recall of navigation patterns**.



FRAME 4: COMPANIONS CATEGORY PAGE

Chunking, Recall & Recognition Analysis

1. Purpose of the Screen

- Highlights family-friendly breeds.

2. Key Elements

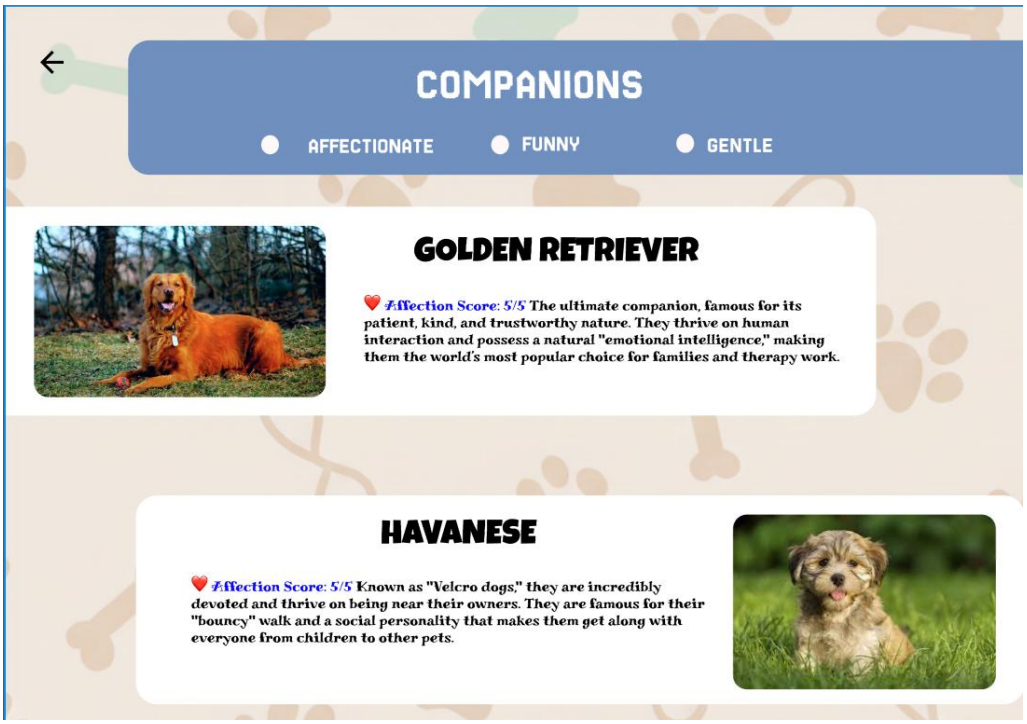
- Emotional traits grouped together.

3. Chunking Strategy

- Trait grouping supports **semantic memory and recall**.

4. Recall & Recognition Benefits

- Visual cues enable recognition.
- Emotional association enhances **long-term recall**.



FRAME 5: HUNTERS CATEGORY PAGE

Chunking, Recall & Recognition Analysis

1. Purpose of the Screen

- Displays hunting breeds clearly and sequentially.

2. Key Elements

- Vertical card layout.

3. Application of Chunking

- One card per chunk supports memory encoding.

4. Recall & Recognition Benefits

- Visual repetition strengthens **recognition**.
- Sequential reading supports **recall of breed information**.
