EXPERIMENT 6 -UID

AIM:

The aim is to design different layouts and color schemes for a cooking app and evaluate user feedback on aesthetics and usability using GIMP.

PROCEDURE:

Step 1: Install GIMP

- Downloaded **GIMP** from the official website
- Installed and launched the application

Step 2: Create a New Project

1. **Open GIMP:**
    - Launched the application
2. **Create Canvas:**
    - File → New
    - Set dimensions: **1080 × 1920 pixels** (mobile UI)

Step 3: Design the Base Layout

1. Create Base Layout:

- Divided screen into sections:
    - Header (App title & navigation)
    - Search bar
    - Recipe display area
    - Recommendation section (ChefBot)
    - Footer (navigation bar)
- Used Bucket Fill Tool for base colors

2. Add UI Elements:

Text Elements:

- App name: **CookBook**
- Sections: Recipes, Popular Recipes
- Recipe names: Donut, Gravy, Chicken Meal, Rice Bowl
- Labels: Easy, Hard, Cooking Time

Interactive Elements:

- Search bar
- Veg / Non-veg filter
- Meal type dropdown
- Recipe cards
- Bottom navigation (Home, Saved, Add, Settings)

3. Organize Layers:

- Created layers for:
    - Header
    - Search bar
    - Recipe cards
    - ChefBot suggestions
    - Footer
- Renamed layers for easy editing

Step 4: Experiment with Color Schemes

Layout 1 – BEFORE FEEDBACK (Red Theme)

- Used reddish/pink color tones
- Simple layout with fewer features
- Limited spacing between elements

- Basic recipe display
- Less interactive elements

Layout 2 – AFTER FEEDBACK (Green Theme)

- Used green color palette (fresh and food-related)
- Added search bar and filters
- Included ChefBot recommendation feature
- Improved spacing and alignment
- Better organized sections
- Added icons and structured layout

Save Variants:

- Exported using File → Export As

Step 5: Collect User Feedback

1. Prepare Feedback Form:

- Created form using Google Forms
- Questions included:
    - Which UI looks better and more useful?
    - Which design is easier to use?
    - Which color scheme is comfortable?
    - Is the content readable?

2. Share Designs:

- Shared both images (Red & Green UI)
- Asked users to compare and respond

3. Gather Feedback:

Feedback for RED Design:

- Looked dull and less attractive
- Fewer features and less engaging
- Layout felt basic
- Less user-friendly

Feedback for GREEN Design:

- Fresh and visually appealing
- Easy to navigate
- Better readability
- More interactive (filters, ChefBot)
- Well-structured layout

Step 6: Iterate and Refine

1. Improvements Made:

- Switched to green color scheme
- Added more features (filters, recommendations)
- Improved spacing and alignment
- Enhanced readability and icons
- Made UI more interactive

2. Final Testing:

- Users preferred green design
- Confirmed:
    - Better usability
    - Better aesthetics
    - Improved user experience

RESULT:

Different cooking app layouts were designed using GIMP.
User feedback helped identify issues in the red design.
The green design showed significant improvement in usability, clarity, and visual appeal.
